

Adedamola Adedapo

Backend Engineer | Payments · Event-Driven Messaging · ML Systems

adedamola.adedapo1@gmail.com | github.com/ichdamola | linkedin.com/in/adedamolaadedapo | Nigeria (GMT+1)

SUMMARY

Backend engineer with 7 years of experience specializing in payments and messaging platforms and the ML and data systems behind them. Built WhatsApp infrastructure for 30+ enterprise brands and fraud detection that cut fraud by 18%.

SKILLS

Languages & Frameworks: Python, Go, FastAPI, Django/DRF, Flask, Celery, RQ, Next.js

Data & Messaging: PostgreSQL, Redis Streams, MongoDB, Elasticsearch, Kafka, RabbitMQ, Pub/Sub, Airflow, Prefect

Cloud & Infrastructure: GCP (Cloud Run, GKE), AWS (EKS, ECR, RDS, Lambda), Kubernetes, Helm, Docker, ArgoCD, GitHub Actions

ML & AI: Pandas, scikit-learn, Optuna, MLOps, OpenTelemetry, FHIR, WhatsApp Business API

EXPERIENCE

360Dialog, *Backend Engineer* | Berlin, Germany (Remote) Feb 2026 – Aug 2026

- Built Python/FastAPI microservices on GCP Cloud Run with Redis Streams for a WhatsApp messaging platform serving 30+ enterprise brands (including Aldi, REWE, Nissan, and Volkswagen) and 1.5M+ end customers.
- Migrated enterprise conversation flows (Nissan UAE, Bauhaus, Aldi Portugal, and others) from a legacy single-container engine to per-client microservices, shipping each cutover via GitOps (Drone, ArgoCD, Vault).
- Built a Redis-backed media-ID cache for the WhatsApp/Meta media API with ETag revalidation and distributed locks, so a 10K-recipient media send needs one upload instead of 10K.
- Added an end-to-end test stage to CI/CD for conversation flows and OpenTelemetry tracing for Redis Streams processing.
- Reviewed 5–6 pull requests weekly, giving feedback on code quality, testing, and best practices; joined the on-call rotation.

Nomad Internet, *Automation & Backend Engineer* | USA (Remote) Dec 2024 – Jan 2026

- Designed backend automation and ETL pipelines for onboarding, billing, and CRM workflows using FastAPI and Airflow.
- Optimized PostgreSQL for high-volume transactions, reducing query latency by 40%+.
- Built event-driven integrations and alerting; partnered with operations on changes saving 20+ hours/week.

Uburu.ai, *Backend Engineer* | Nigeria (Remote) Mar 2023 – Dec 2024

- As main backend engineer, architected most of the backend for a healthcare data platform (Django/DRF, PostgreSQL, Redis on AWS EKS), connecting partner hospitals' databases and FHIR APIs for patient search and federated cohort queries; wrote 56% of the codebase and handled on-call.
- Built secure hospital integrations with encrypted credentials, federated queries across external PostgreSQL databases, and bulk import/export pipelines.
- Built CI/CD with GitHub Actions, Docker Buildx, ECR, and EKS rolling deploys, replacing manual EC2/CodeDeploy releases and cutting deployment cycles by 60%.

Umba, *Software Engineer (Part-time)* | California, USA (Remote) Mar 2023 – Jan 2024

- Built fraud detection for a digital lender: RQ/Redis workers score every loan application with a scikit-learn classifier, plus rule-based identity checks and scheduled fraud-ring clustering (Airflow, AWS Batch), cutting fraud 18%.
- Cut billing API latency from 1.2s to 85ms, saving \$42K/month, by moving status history into an append-only log, adding composite indexes on hot lookup paths, and offloading third-party calls to RQ workers with per-user Redis locks.
- Owned MLOps for credit and fraud models with Prefect on Kubernetes, Optuna tuning, and Helm-based releases.

Sendme.ng, *Senior Backend Engineer* | Lagos, Nigeria Feb 2022 – Mar 2023

- Led 10 engineers building microservices for logistics, inventory, and ERP platforms used nationwide.
- Reduced backend latency from 47.8s to 97ms by moving heavy work to event-driven processing with Celery and RabbitMQ.
- Built WhatsApp integrations for order automation; mentored engineers and introduced TDD with Pytest.

DataTotem, *Software Engineer* | Nigeria May 2019 – Oct 2021

- Migrated monolithic systems to microservices with Python, Flask, and Django on AWS and GCP.
- Automated testing with Pytest and Selenium, reducing test cycles by 70%.

PROJECTS

BuzzMart, *WhatsApp-first e-commerce platform (part-time, for DataTotem)* | DRF, PostgreSQL, Next.js 2025

- Built a Django REST API and Next.js storefront with real-time order tracking (SSE, WhatsApp) and secure CSV import/export.

EDUCATION & RECOGNITION

B.Sc. Electronic & Electrical Engineering, Obafemi Awolowo University 2021

Postgraduate Diploma in Cybersecurity, Lead City University In progress

PyCon Nigeria speaker (2019, 2024) · 2nd nationally, IEEE Xtreme 15.0 · Udacity Cloud & AWS ML Nanodegrees
